

Speaker 1:	00:01	This is the rich dad radio show. The good news and bad news about money. Here's Robert Kiyosaki.
Speaker 2:	00:08	I was trying to get the best out radio show that good news and bad news about money and the title of this program is lies lies.
Speaker 3:	00:16	Open up your eyes. I'll say it again it's about lies lies. Open up your eyes. I mean but a question be how many of you trust what our government is telling you. How can you trust the medical institutions trust pharmaceutical companies. I mean you trust the banks. Let me introduce my friend Donald the president really trust Congress. I think everybody's got everybody's hand in somebody else's pocket and everybody's out here for the money. So that's why they're rich at radio show because the purpose of the show is to take another direction. But as the high priced of your money because everybody is after money they are willing to lie to you. They will tell you anything to get you to part with your money or as that old saying goes. I'm here from the government. I'm here to help you.
Speaker 3:	01:01	You know I mean God Almighty what a lie that is. And the reason this program is put together was a few months ago I was invited by ed g. Edward Griffin and he is my hero because he wrote the book The Creature from Jekyll Island and I recommend everyone I read that book if you want to find out why going to school and working for money and saving money and investing for the long term in the stock market is really stupid. I mean you're being ripped off. So the book is called The Creature from Jekyll Island. It's about the Federal Reserve Bank it's about Bernanke it's about yallah and it's about Obama it's about Hillary it's about how the government has their hands in your pocket. And Edward Griffin is a researcher is not a Ph.D. just a natural gift of researching.
Speaker 3:	01:42	So at that time he suspects there's a lie. He goes out and researches it. So he wanted to know why what why would the rich getting richer What is this thing called the Federal Reserve Bank or the central banks or the ECB pan or the Japanese Central Bank and he researched the whole thing and it's extremely well written documented book. So that time Ed is on our program and all this is all he asked me to say something I show up. So he asked me Robert would you speak at the red pill Expo in Bozeman Montana and I have no idea what the red pill Expo is but because griffons asked me to show up I show up and said smile those things and the red pill Expo opened up my eyes because their red

pill comes from the movie The Matrix and I don't watch movies.

- Speaker 3: 02:25 So I had no idea what the Matrix was about. But apparently the Matrix about you could take a blue pill and you can see the blue stands for B.S. The government is telling you or you can take the red pill and you can really see what's going on so I just showed up with my friend Greg Jagggers We drove all about the way I would drive around Montana and we shopped the red pill Expo not knowing anything about what the red pill is just as references are show up. So I went there and my God it opened up my eyes it was almost disturbing. Two or three days I've had in a long time. It was deeply disturbing that the way that today's program is going to have a number of people who were at the red pill expl they're going to share you what they shared at the expo.
- Speaker 3: 03:08 And one of them is about this interesting subject it's called health care specifically cancer. I mean how many are afraid that you might die of cancer someday. I mean you have cancer I mean almost died of cancer. I mean I think that cancer is a very good profit center for most people. Well for the government as well as the pharmaceuticals they're not here to cure you. They here to make you rich themselves rich. You're going to hear about cancer although half of the program we're going to hear about these environmentalists you know like Al Gore or those guys and Hillary and Obama and other environmentalists really communists. So it's going to be a controversial program but lies lies cancer and the environment. So if you're if you're a blue pill you know you're drinking the Kool-Aid.
- Speaker 3: 03:47 This is not your program but if you really want to be disturbed or you are afraid you might die of cancer or you know the environmentalists are brainwashing your kids in school to become communists. This is your program. It's OK. Anything you want to say.
- Speaker 4: 03:59 Well you know our job here at Radio is to show all points of view and we talk about the three sides of the coin and I'm very interested in all of this because. Yeah absolutely. We're being lied to and when we talk about health I mean look I rich dad is about wealth. So for me what good is wealth if you don't have your health and the health care which you Robert have called Wealth Care because it is all about people in the business the big pharma the insurance the hospitals all getting very very wealthy politics at our expense. And I actually have been told that there will never

be a cure for cancer in the medical profession because there's too much money being made.

- Speaker 5: 04:34 So our guest in studio today was Sherry Gray and I have been dear friends wrestles with the real estate guys. Well we just found out that Sherry has been a fan almost 20 years now. So I was on the real estate guys radio show while the first Proclus I ever went on to talk about reached out to 20 years ago. And Sherri just found out she has cancer and didn't look good. It's all going into details. Sherri gray and our guests from owl by the telephone is Ty Bolinger and is the author of Freedom of health freedom advocate and cancer research. Is a very controversial guy. I mean he might have a wanted poster by the Cancer Research guys ties the author of The Truth about cancer.
- Speaker 4: 05:13 But Cheri I would like to welcome Cheri to the program and Russell to the program. Thank you for being here. And Sherry let's start what was it like to have cancer.
- Speaker 6: 05:22 Well I got diagnosed with stage 4 non-Hodgkin's lymphatic stage for stage 4 non-Hodgkin's lymphoma stage 4 and stage 1 or stage 4 is the worst the worst. OK. And it was throughout my whole body through my. It was in my liver my spleen my bones my skull. You know it's a systemic cancer. I got diagnosed in April of 2015. And at that time it was shocking. I think I went into denial. I was just like this can't be happening to me I didn't really have any symptoms. And fortunately my husband just received an email from Edward Griffin about a docu series coming out called The Truth about cancer that type Bolinger was putting out. So we decided that we were going to watch it and kind of learn more. And because I had experienced my mother passing away from cancer through traditional medicine and also a very close friend.
- Speaker 6: 06:17 And so I knew that you know ugliness of cancer and what it could do and I was scared I didn't want to go down that path and to be honest I didn't wanna lose my hair. So I watched this docu series and it opened my eyes. It was just life saving information. So
- Speaker 3: 06:34 Russell What were you going through when Sherri and also she has when she's diagnosed with cancer.
- Speaker 7: 06:38 You know again having seen her mother die from cancer it was really scary. But the one thing that I've learned from you Robert and Kim is the you opened up Kim talking about how important it is to look at all sides of the decision and I don't

always just trust people because they have a white coat on. And so we did we went to Stanford. I went to one of the top oncology people in the area of lymphoma. They gave us their recommendations. We consulted with some doctor friends of ours and you know we had a decision to make do we do we try conventional first and then fall back to alternative or do we try alternative first and fall back on conventional. And we decided that after evaluating the way the treatments affect your body that it would be better to try alternative first because it was about making you stronger and that everybody couldn't beat it.

- Speaker 7: 07:21 Then we could come back and try something else. And so the first thing was just a steep steep learning curve. I tried to keep up with Sherri in terms of learning and I just couldn't. It literally became a full time job for her. And then my job just became to make enough money to pay for the treatment none of which is covered by insurance.
- Speaker 4: 07:35 I can't think of a more important job in saving your life. Right. I mean that's where all the attention goes.
- Speaker 5: 07:39 Sure. What did you learn from Ty Ballinger and is the truth about cancer. I
- Speaker 6: 07:42 think the biggest thing I took away from Ty is well two things. One is that there was an alternative way and there is hope to really overcome the cancer and to come out stronger and healthier and happier and just wiser in all areas and I think Kim you mentioned it earlier when we were talking that it's your whole being that you're getting healthy and it's your mind body soul and spirit. And so you know we're just fearfully and wonderfully made. And that if we can understand the truth about how to have a healthy body healthy mind healthy emotions and everything then that goes a long way and bring healing. So he just gave me hope to continue to do the research to look for answers out there and to not go the conventional way.
- Speaker 4: 08:26 So Ty Welcome. Welcome to the program. Thank you for having me on today. Really
- Speaker 8: 08:29 really a pleasure to listen to this. And welcome back with more on the story. Very encouraging to hear how well you've done over the last couple of years.
- Speaker 9: 08:36 And I think you hit the nail on the head when you mentioned that it's about a whole body approach and I think that's where sometimes the potential treatments will fall short

because they do they are able to shrink tumors and they are able to kill cancer cells. There's no doubt that no human chemotherapy or radiation can kill the cancer cells shrink a tumor or whatever you want to really want to do with that mask. But that didn't do anything to fix the whole problem that gave rise to some of these began with the.

- Speaker 10: 09:04 How did you come across this. You're a medical doctor or something else or I'm not Robert.
- Speaker 8: 09:09 I'm a researcher. I'm actually a professional graduated in 1991. I
- Speaker 11: 09:15 never dreamed that. Twenty six years later I've been doing this everything kind of changed me and my family in 1996 when my father was diagnosed at the age of 52 years old diagnosed with stomach cancer on July the 1st and we buried him the end of July and he died in 25 days from diagnosis. Wow. And that was that was me beginning to learn about cancer and the treatments and how ineffective treatments are today and over the course of the next several years after my father died I lost both grandfathers and another cousin uncle and finally my mother all the cancer and all that while I was researching and kind of using the research skills that I got in master's program to the CPA and learning about the internal revenue code.
- Speaker 12: 09:53 If you can decipher that you can do that for medical.
- Speaker 5: 09:57 So what is what is Big Pharma or the government or the medical society not telling us what is the truth about cancer.
- Speaker 13: 10:04 Yeah but the truth about cancer is that there is hope. And sure President Obama that is on that. There are a multitude of different treatments that can bring your body back to equilibrium homeostasis bring it back to help whatever you might call it. And those are just not being pushed in your major oncological which is what we're what we are told today. If you're diagnosed with cancer and I've heard this from thousands literally of cancer patients is that you've been diagnosed with cancer. We've got to start you on chemo and radiation has been it's possible we might have to do surgery to kick up the ass. And you know it does not matter what you eat while you're on treatment. The fuel for your body doesn't matter that's it may just fix it don't worry about it. And that is not the truth.

- Speaker 13: 10:42 The truth about cancer is that what we eat the fuel for our bodies matters a lot. It's like if you have a formula one race car and put the wrong fuel in it's not going to run. And our bodies are as you mentioned they're 50 weren't we. But we don't put the right fuel and they won't run properly and they won't feel the way they're intended to. So the whole purpose of a holistic treatment is to give the body the fuel that it needs. And it really does the curing if not the substance that does the killing if not the apricot are that turmeric or whatever you've been eating or drinking or taking that's just putting giving your body the fuel that it needs and your body is what healing wants. Robert
- Speaker 5: 11:12 Hill is not going to pitch that radio show we're talking to Ty Bollinger who is the author of The Truth about cancer. What you need to know about is history treatment and prevention which came out in 2016 as well as in studio Russell Sherrick. Russell is what the real estate who's been a friend for 20 years now. And Sherry Gray is here because she was just diagnosed with cancer. So we're talking about what is the truth. What can you do. Do you have to do it like weed eater and poison the stuff. We come back we'll find out more what you can do or alternatives. We're not saying don't do the medical thing. All we're saying is keep an open mind. You're listening to the Reichstag radio show with Robert Kiyosaki.
- Speaker 14: 11:51 Every business owner and real estate investor needs asset protection entities like LLC S or C Korps are vital to protect yourself and your business. Let corporate direct guide you through the process of forming a corporation or LLC corporate direct is owned by rich data adviser Garrett Sutton and is Robert Kiyosaki choice for corporate formation mentioned rich dad and receive one hundred dollars off a formation called 806 hundred 1760 That's eight hundred six hundred 1760 or visit on line at corporate direct dotcom. That's corporate direct dotcom your financial education continues.
- Speaker 1: 12:27 Now back to Robert Kiyosaki and the rich dad radio show.
- Speaker 5: 12:31 Welcome back Robert Kiyosaki which is about is about money. Once again you can listen any time in your schedule on iTunes or Android and all of our all of our programs are archived at Rich Dad radio. So today we're talking two subjects today on this. Much to our radio program is what is the truth about cancer and the second is the truth about these environmentalists. So right now we're talking to Russell and Sherry gray wrestles with the real estate guys.

Hey guys cruise which was a fantastic program for guys who are really into real estate and Sherri is a wonderful wife who was diagnosed with cancer but also what type Bollinger is author health freedom advocate and cancer researcher and sherry. And we will have people contact you directly.

- Speaker 15: 13:08 Yes I'm happy to help anybody and you know answer questions. How did they contact you. They can send me an e-mail to see at my war with cancer.
- Speaker 5: 13:16 So Russell in your research on this what did you find out. Well you know what we're not blaming the doctors and things like this. And medicine has its place and alternative has its place but what did you find out why are doctors so blind to tie Ballinger side.
- Speaker 16: 13:28 Well you know again trying to look at all sides of the coin. I went and talked to conventional doctors friends that didn't have an agenda they weren't trying to sell me treatment. They were just telling me what they knew out of their training. And I realized that their training comes from research and that research is funded by companies that have an agenda to sell certain types of products. All right. When I read Eddie Griffin books he Edward Griffin wrote a book called The World Without Cancer and this he wrote 20 years before he wrote creature from Jekyll Island. And in that book he outlines the history of some of the research tintype probably knows a lot more about this than I do but it made me realize that the doctors the health care providers on the frontline the people that are prescribing these treatments they're not nefarious they don't have any bad agenda.
- Speaker 16: 14:05 They're telling you what they've been trained. They believe it but their training is narrow and the ones in them. Well the research the schools the academics the institutions that largely have been funded by the profits from the selling of the prescriptions. And so when you understand the money behind it and the motivation behind it then you can see why maybe they're not seeing the whole picture. So
- Speaker 17: 14:27 what did you find out. Yeah that's a great summary of what I was talking about. And in actuality it goes all the way back to 1910 called the Flexner Report and the Flexner Report was funded by the Rockefeller Institute and the Carnegie along with the American Medical Association.
- Speaker 18: 14:41 But in essence what happened was that through the Flexner Report which was eventually submitted to Congress the

medical school curriculum was co-opted and it was it was been funded from 1910 onwards by pharmaceutical research. They play members of the board of directors on the board of directors at major hospitals across the country. All of them hospitals that were teaching drug and medicine you know feel for every You received a lot of funding from the Carnegie and the Rockefellers and the hospital or the medical school that were teaching more natural type medicine than be chiropractor or homeopathy or or herbalism or a lot of things that are kind of frowned upon today. Those were pervasive in 1910 and all of those fell by the wayside over the next 20 or 30 years because they didn't receive the funding. And so for now 100 years later after seven years later after the election the medical schools that are left in the United States that do teach the curriculum to all of the medical doctors they've been heavily funded by pharmaceutical companies.

- Speaker 18: 15:30 The curriculum was copied over 100 years ago and so by the by all the doctors to get out that they think they have a good education on how to prevent disease they really haven't been taught that there's other ways that the natural way is rough mentioned. They don't know hardly anything about nutrition they're not taught in medical school so they're not bad people who appreciate what has nothing to carry.
- Speaker 4: 15:47 It's just even a genius is not able to teach you what he or she does not know until you mentioned during the break something about the Senate discovered something back in the 1950s.
- Speaker 19: 15:56 Yeah this sounds like oh I can't believe this. You know there's no way that these treatments are being suppressed. It sounds like a conspiracy theory to me. There's a big C word. Well I think there is a committee that was convened it was headed up by Fitzgerald who a special agent with the Interstate Commerce Committee and they were tasked with the whether there was an active conspiracy to suppress national cancer treatment in the United States or that by 1953 this committee determined that their conclusion would be yes there is an active conspiracy to suppress natural cancer treatment in the United States. So whether it sounds conspiratorial or not you can go back and I think if you think this was in the appendix to the national record and you can see that the United States when it agreed with what we're saying these treatments are being suppressed and even are being suppressed if they're just not lucrative there's a lot still going on today I mean nothing has really changed.

Speaker 5:	16:43	Well what's your what what the change you had to make and that you go to Mexico or someplace. What
Speaker 6:	16:46	is your treatment versus like traditional medical treatment write well what I immediately started doing was going on a whole food clean diet diet or way of eating where it was just plant based juicing doing really eating healthy and then McDonald's.
Speaker 20:	17:05	No sugar no alcohol no processed food. Very organic organic mostly vegetable. You're
Speaker 19:	17:12	truly you're bought with what it needed to be healthy. Exactly
Speaker 6:	17:14	exactly which I learned from watching the tweets about cancer. That was one of the great things that just changing just the terrain of my body getting healthy nutrition. And then I started researching where I could go.
Speaker 5:	17:26	What did you what did you have to give up which is what a lot of people don't want to do.
Speaker 6:	17:29	Right. Bread and that was one of my favorites. So because it cost us processed white bread white flour gluten anything with gluten in it. Alcohol. Alcohol wasn't a big drinker so that really wasn't difficult for me.
Speaker 20:	17:40	But wine is healthy right. Tell me wine is helpful in coffee. Organic wine coffee and a little bit of both. Thank you. Thank you. You just saved your butt.
Speaker 21:	17:52	But you know one of the things the series mentioned that we did a lot in common is that the white flowers right off the bat. Welcome back. And you might know that there's not really healthy foods per se. These are low glycemic index and all of these starches and processed foods convert sugar and that's the problem because cancer cells of course will be off on a sugar free energy. They're not there end of it. So if you're if you're eating foods that are all sugar proxy servers you're feeding cancer cells. So one of the best ways to take care of cancer in your body is to solve it. That's what you get you.
Speaker 15:	18:19	Yes. I also went on you recommended when I went on a 21 day fast cleansing just to set the terrain kind of reset the terrain of my body that was very difficult. That was hard. But that was vital. And then and then I did go to Mexico to a clinic down there and it was all or an alternative and I did

variety of different things one being keep hyperthermia chamber where they heat your body up to 104 degrees cause cancer doesn't like heat. So and then I was nutrition I did of right machine. A lot of vitamin C and other nutrients in the Ivey's some light therapy ozone oxygen. It was just a lot of different. And how long were you there. I ended up staying there nine weeks. Did you do any Western medicine. I did choose to do what's called IPTA and that's insulin potentiating therapy and I did that.

Speaker 15: 19:10 I had six doses of that which is a low dose chemotherapy where they lower your insulin levels. And it's like targeting the cancer cell and then they introduce a chemotherapy drugs to that only attack the cancer cells and they follow it by glucose so the cancer cells immediately want to absorb that. Eat that glucose which is that which is cloaking that chemotherapy drug and then it just attacks the cancer cells.

Speaker 9: 19:35 Sure that's it that's a great example of how Western medicine can be used in conjunction with natural medicine effectively. Because in that way do we ever say you don't do this or don't do that don't you know what you know what we say is that there are options and you should explore all your options. You know one of the things that I've made this mistake during this interview and I heard almost everyone else called the Alternative medicine alternative medicine but it's really not. It's really time tested medicine. One of the ways that some of them has an argument is to change the vocabulary. It's a report we're told to believe that radiation our traditional treatment but the treatment is something we can use partitioned in different new reality these other medicines been around a lot longer. I think that we should always consider what we can do is to take the best of both worlds. So

Speaker 15: 20:17 what's your status now surely as of now it's 85 90 percent gone from stage 4 from stage 4. It's no longer my liver my spleen my bones anyway. It's still in some no lymph nodes. And I'm still trying to battle that through nutrition and be healthy while I'm doing it through the whole my whole being as you mentioned often and you know there are people that live with cancer for six years.

Speaker 17: 20:40 In effect if you can do that. I don't see that being a problem. People live with other diseases for a long time and you could still live a long healthy life and not have any kind of side effect. You still have cancer diabetes 111 then so be it right.

- Speaker 5: 20:52 Once again as Robert Kiyosaki the radio show look you know we're not endorsing any of these processes and procedures or ideas. We just want to bring to you a different idea so that you're not sucking on the blue pill and buying mutual funds all all your life. You want to me. So anyway I want to thank all of you for your work. Is the author of The Truth about cancer. What you need to know about cancer history treatment and prevention wants cancer step outside the box and his Web site is cancer truth dot net. And the truth about cancer.
- Speaker 22: 21:21 And to your your video series is free. It
- Speaker 17: 21:25 is yeah it's called we've got several docu series one was called what the cure is and the question is news. And then we have a global class that operated out the truth about cancer. I mean you know you've been referring to the book wrote a book by the same title.
- Speaker 5: 21:37 Excellent. Thank you for your work and also dear dear Washington Sherry great and well thank you for sharing your story. Russell thanks for bringing it to our attention. So we come back we'll be going into the next. Lies lies lies. It's about environmentalists that are right back. You're listening to the rich dad radio show with Robert Kiyosaki.
- Speaker 23: 21:58 Richard coaching offers a phenomenal variety of services and custom strategies all aimed at ensuring a secure comfortable and rich future for you and your family. Now you can get weekly access to exclusive rich coaching services through our lifestream events reached at dot com and click on the on demand banner at the top of the home page. Great new videos are updated regularly. Get inside knowledge and insights from Robert Kiyosaki himself Richard at coaching professionals and more go to Rich dot com and click on the on demand banner at the top of the home page. This
- Speaker 1: 22:25 is the rich dad radio show. The good news and bad news about money. Here's Robert Kiyosaki.
- Speaker 5: 22:32 Welcome back Robert Kiyosaki David Show. The good news about you is about money and you can listen to the rest at Radio at Qualcomm any time anywhere on iTunes or Android and all of our programs are archived at which to add radio. And we wish them all of them as we said number one is you can listen to this program again and learn even more. What number two is if you hear something that's important to a friend family member or business associate

you know please garbage dad radio. Oh listen those Procope again. And I want to thank Ty Ballinger and Sherry gray they were here earlier are talking about the truth about cancer and how cancer is big money as well.

- Speaker 10: 23:05 This is a lot of money and that the second part of this problem and two very special guests because I met them at the red pill Expo and once again for those who may not know what the red pill is about it comes to the movie Matrix the blue pill versus the red pill. I went to the red pill expl because man I respect for I much do you have a griffin or the creature from Jekyll Island and as you may or may not be aware of there is this huge battle right now in the world between the elites and the elites or those who went to the best schools like Hillary and Bill Clinton and Obama and those guys as as well as the people who run our central banks and all this and they're basically telling us how to run our lives. And those are the elites.
- Speaker 10: 23:43 And what they're telling us it's not working but they still keep telling us these lies lies lies lies lies. So a second guess. Holly Swanson and Debbie Bagchi go loopy. They're going to talk about environmentalists because everybody thinks all these environmentalists are so good especially with Houston and you know global warming and all this global environmentalists are good people. Well they could be the bloody enemy because they're the elites.
- Speaker 24: 24:08 And I've had my run ins with them several times and they're not nice people like the teachers union guys.
- Speaker 22: 24:13 They're not nice people they have an agenda that has nothing to do with the environment and it comments you know this is this is very very eye opening and I just want to start with since we have such a short time here with our two guests Haley Swanson She's a writer political activist and leading authority on the hidden agenda of the environmental movement. And Debbie Buchi gloopy is a Californian cattle rancher. She's an educational speaker on property rights dams water rights conservation all types of sustainable development issues. So I want to welcome you both to the show right now. And
- Speaker 10: 24:42 I was really impressed I'm sitting there I was listening to these two young women just I mean letting it rip. Talk about red pill. So Holly welcome to the program. And I like you because you talk about the environmental movement but how environmentalists are going into our schools and brainwashing our kids. What's going on there.

- Speaker 25: 24:58 Absolutely thank you I'm happy to be here. Specifically the environmental movement has created a nonpartisan image when in reality this political movement the environmental movement is a political movement which is advancing a specific political agenda associated with a specific political philosophy and party. And that means the environmental movement is advancing goals that mere communism and green party ideology under the guise of environmental protection. We are seeing ever increasing environmental regulations to control everything from business to private property rights and through this the environmental movement intends to change the cultural religious economic and political structure of our nation. And the most underhanded strategy of the environmental movement is to use alleged nonpartizan environmental education and this is going right now into every school across the nation. It's a vitally important thing to understand is to use environmental education politicized curriculum to politically indoctrinate our children to adopt communist beliefs and then mass produce a nation of new voters who will go forth and impose that agenda a communist agenda on the American people. It's imperative we stop the political indoctrination of our children immediately.
- Speaker 10: 26:09 So what does a Communist can mean some ideas of a communist agenda.
- Speaker 25: 26:12 A perfect example is teaching social justice in our schools. Although that sounds like a nice idea. It's the underlying political philosophy that is the problem right now in Portland Oregon the Portland Oregon school system adopted a resolution to teach climate literacy. Part of that is to teach children to be social justice activists as part of the whole environmental lesson plan. What's imperative to understand is what this social justice means. Social justice is this is the environmental educators definition of social justice. Social justice is achieving equality in the distribution of goods and well among all groups in society that definition of social justice achieving equality in the distribution of goods and wealth among all groups in society aligned directly with the CIA the Central Intelligence Agencies definition of a communist form of government and the only way you can distribute wealth and goods equally is to first train the students to believe that that wealth and goods needs to be seized and controlled and that what that really simplifies out to is you take from the rich and give to the poor.
- Speaker 10: 27:20 There you go.

- Speaker 26: 27:21 And that's why you for those kim has known me for 30 something years now and I always said most schoolteachers were communists they were bad people but they really had no financial education but they really believed that the rich stole everything.
- Speaker 27: 27:33 And that's as much as this guilt trip is being imposed on our children. And what's happening is from a emotional standpoint the children are being led to believe that Communism is a more fair way to do things. And it's appealing to their hearts. And there is no mention of how many millions of people or hundreds of thousands were murdered under a communist regime that really doesn't allow political liberty.
- Speaker 10: 27:56 I understand that it's more of a philosophy and I see that more and more every day because I'm a politically incorrect Hunter and these kids come up to me they don't know anything about hunting and they're rattling me. They telling me I'm a rich man I'm an evil man and all this stuff I said which got to you from what you're saying is that's part of the environmentalist agenda. You know and so nice. Our other guest is a person who is a landowner and that's Debbie bacci gloopy and she is a California cattle ranches a young lady but her parents on it. And Debbie you're the person on the ground and Holly's Elaan talking about what the environmentalists are going into the schools is what Debbie saying. Is there any validity to that.
- Speaker 28: 28:32 Yeah Holly what Holly is saying is absolutely accurate. And part one of my areas of specialty is sustainable development. I go to the United Nations meetings. In fact I'll be going to the next United Nations Framework Convention on Climate Change meeting the one where you know global warming climate change Al Gore all these global leaders gather to talk about how we all must live sustainably a sustainable development lifestyle and order to maintain the entire globe whether you know the temperature of the globe because if the Globe heats up anymore. Oh my gosh there's going to be mass catastrophes like Houston I I guarantee you Al Gore is jumping. Jumping up and down right now with excitement to back his claims which have been completely erroneous and false and scare tactics that Al Gore does. What
- Speaker 3: 29:16 did they get in a debate. Well not a political place. Tell us what's going on on your ranch. I mean what are the environmentalists doing on your ranch.

- Speaker 29: 29:24 Well on races across the United States on your ranch on your there we can't say specifically that they're doing something to our ranch but what is happening as far as like these radicals they're coming up with regulations fines fees you can't cross a river or a river that runs on your property all the rivers must be fenced. They are trying to remove dams and what they'll do as a result of removing these dams destroying dams and sending you know pollutants out to the ocean and killing fish species this is right in between we're Holly and I both live called the Klamath River Dam. What does that dams what does that have to do with these radical environmentalists will do what they call full basin management. So if you have water we have adjudicated riparian historic water rights throughout our ranch. If these dams are destroyed and the radical environmentalists get their way this includes tribes to Indian tribes if they get their way they will do full basin management take control of all water in a base as the water rights thereafter.
- Speaker 30: 30:18 Water. Right.
- Speaker 3: 30:20 Kim and Kim and I am in the same battle because the fishing game took my drink our water rights away also.
- Speaker 30: 30:25 So what happened. You can't do that. I know I know. That's all we fighting that's celebrating. So I get tempted to introduce wolves on your property. Absolutely. Hello again Jack. And what will that do to your ranch.
- Speaker 29: 30:36 Oh it will devastate it. They use wolves and it's been proven in Yellowstone these wolves actually already had a calf with its butt ripped out. I have the video of this little calf with his eye popping out. These wolves they don't take the entire life so they don't take the entire horse the entire cow The entire life of that line.
- Speaker 30: 30:55 I think introducing wolves why do they. Because
- Speaker 29: 30:56 they believe these radical environmentalists believe that wolves will will re wild rivers.
- Speaker 30: 31:03 Now why is that. What does that mean.
- Speaker 29: 31:05 That means that livestock go to rivers and need to drink out of out of rivers so they cross rivers. If an animal if you've got a lot of animals crossing a river it's where they form the river it starts to make the river a little bit wider. And as you have a wider river the water gets warmer the water quality

declines so therefore if you can release wolves to attack these undulates like deer and antelope and horses and cows. First of all it gives ranchers and farmers a tougher time. We don't care about the money don't pay us the money for our dead cow we love our cows. So so. And the other thing when you when you've got a wolf they cannot prove that most of the time that the cow or the livestock that has you know obviously killed by a predator is a wolf because by the time these mentalist send out the government agencies or we call the government agency to come do an investigation you cannot tell because of the decay of the animal.

- Speaker 29: 31:58 You cannot tell how prove most of the time that it was a wolf that it could be a mountain lion. It could be a coyote it could be all sorts of thing.
- Speaker 30: 32:06 I just try to tell you how to run your ranch. Absolutely. So
- Speaker 5: 32:10 once again as Robert Kiyosaki a rich dad radio show with a right back. You're
- Speaker 31: 32:14 listening to the Rick's dad radio show with Robert Kiyosaki.
- Speaker 14: 32:20 Every business owner and real estate investor needs asset protection entities like I I CS S or C Korps are vital to protect yourself and your business. Let corporate direct guide you through the process of forming a corporation or LLC corporate direct is owned by rich adviser Garrett Sutton and as Robert Kiyosaki choice for corporate formation mentioned rich dad and received one hundred dollars off a formation called eight hundred six hundred 1760. That's eight hundred six hundred 1760 or visit online at corporate direct dotcom. That's corporate direct dot com. The
- Speaker 23: 32:51 key to achieving your dreams is to develop a rich mindset instead of an excuse mindset. Instead of saying I can't afford that ask yourself how can I afford that. It's amazing how a simple shift in thinking can open a world of new ideas and endless possibilities. But the rich debt company helped kickstart your journey to Financial Freedom. Robert Kiyosaki and the Richard ad company have compiled Roberts top secrets to creating a rich mindset now available in a 10 minute ebook how to achieve a rich mindset. This offer is available for a limited time only. So get yours today. Get your free ebook how to achieve a rich mindset rich data and look for the better. Again this is available only for a few days so act fast get rich at dotcom and look for the how to achieve a rich mindset banner.

Speaker 2:	33:30	Log on to Rich Dad radio dotcom while you listen. Now back to Robert Kiyosaki. Welcome back Robert Kiyosaki an amateur radio show The good news and bad news about money.
Speaker 5:	33:38	Like any radio program anytime anywhere on iTunes or Android and all of our programs are archived at Radio dot com. If you have a friend or family will listen this program Radio dot com.
Speaker 26:	33:48	We're going to ask Robert S. on this program because I press I believe when I went to the red pill Expo in balls Montana and this is just a spattering of what was last 40 minutes of what I heard for two or three days up there. It was disturbing. It was so disturbing. And once again the red pill or blue pill comes from The Matrix where most people live in the blue pill world when they go see what they want to see and they believe in the Easter Bunny and Santa Claus. And then the red pills when you take it open your eyes to see what's really going on. As a kid will tell you when I came back I was deep and deeply disturbed because some of the things I suspected that had been happening to me happened to and it's happening for Kim and I personally.
Speaker 24:	34:28	We've had the fishing game take our water rights away water rights that word or deed it to us by Grover President Cleveland. And so what's really going on is a in my opinion the battle of the elites versus the people that are actually the working class people of the world and these elites leads one to run our lives. And that's why we had this program. We're not saying to believe in all this but when I heard about the water riots on the walls and anti-hunting and all this other stuff we're being we're being our lives are being run by people like my poor dad academic a students who knew Jack about real life but they want to tell us how to run our lives our businesses impose regulations on all this. If you like that fine. If you're one of these people like Hillary or Obama and all that.
Speaker 24:	35:11	That's your choice. And they're good people I'm sure. I just don't like their politics personally but when when the when the fish and game department takes my water rights away here in Arizona I have a problem with that. I can't touch on because there is a government and the comments coming.
Speaker 22:	35:25	Well we have two guests with us on this program Holly Swanson and she is a writer political activist and leading authority on the hidden agenda of the environmental movement. She's the author of two books set up and sold

out. Find out what green really means and training for treason. The harmful agenda behind education for sustainability. And we also have Debbie gloopy she's a Californian cattle rancher educational speaker on property rights dams and water rights conservation and sustainable development. So Holly let me ask you this. OK. I can. I would consider myself an environmentalist. I am too. I we we don't eat a lot of money to Greenpeace we give to organizations that we think are doing good work. How

- Speaker 25: 36:01 do we know who's doing what we all believe care about the environment animals. And this is the emotional blackmail piece that the environmental movement has used the what we need to do to make critical distinctions between sound steps to create a healthier environment and being coerced or manipulated into submitting to green communism is to do a couple of things. One I would encourage you to read training for treason because it outlines how this indoctrination process got started for instance in nineteen ninety three then Senator John Kerry started an organization called second nature specifically designed with the specific goal to use education to change the cultural religious social economic and political structure of our nation. Second Nature works with the Earth Day Network with multiple environmental groups across the board. Greenpeace has been part of the Sierra Club the only way we can get to a point of making the critical distinctions you're talking about Kim and we need to do so is to understand first of all the general agenda of the environmental movement is to impose a program that mirrors communism. That is it in a nutshell.
- Speaker 26: 37:10 Call it know this is a very inflammatory word basically what communism is is control of the economy of our money and our lives. That's really it's central planning it's called. That's why that's why we have central banks. You know that's it that's why we that's why we have all these elites up there in Congress wondering why I don't like my poor dad who can't even run their own life and they want to tell us how to run. Oh I said my dad was also a very good man. That's why I'm an all my family are schoolteachers. But they really can't even run their own lives and they're trying to tell me how to run my life.
- Speaker 27: 37:40 And you hit my head because people are buying into this from an emotional standpoint and the environmental movement has spent billions of dollars creating a media and public image of being nonpartisan and only caring about the environment. So the political agenda has not been scrutinized. That's what we need to do.

Speaker 10:	37:58	And what you're saying is what you're saying is environmental movements like the Trojan horse. Yes. It gets inside the schools and then the little the the real political activists drop out from the Trojan horse into the school system and affect our kids brains right.
Speaker 27:	38:12	Absolutely they're telling our children what to think about a political issue. They're training them how to respond to that political issue. They're training them. The green movement is training our children to be political activists. So as they grow up they create mass produce a nation of future voters who are for a planned economy.
Speaker 30:	38:33	Having the private property rights.
Speaker 26:	38:35	So for example you know there's so many people anti-hunting. And I was just at a wedding in London and a lot of the people were there were from Kenya and their anti-hunting and they and they outlawed hunting in Kenya. The moment that did that 80 percent of all the animals died. And the reason all the animals died in Kenya because outlawed hunting and when there's no hunters in there what happens is poachers come in because hunting pays for anti-Hitler taking all the money the hunters bring and pays for the artis so all these people in their good minds and they're highly educated academics like my poor dad who was anti-guns anti-hunting anti all that stuff. They don't know that being anti-hunting in Kenya means being anti animals also. So they're actually killing the animals or trying to save as that is how they're myopic or one side of that can't see that that's right. And
Speaker 25:	39:19	many people are involved again because they're only hearing one side of it. And as you were just mentioning and Debbie was mentioning just like reintroducing the wolves in Yellowstone supposedly to get everything back in balance they have devastated the whole herd. Right.
Speaker 32:	39:33	The threat that ranchers and farmers like us are going through wondering you know when are we going to see the wolves on our property and when are we. You know my dad goes out every day looking to see check his cows and you know my dad is aging. He didn't expect that. You know in his retirement years that he would have to worry about government. You know we always thought government was supposed to be on our side. Now governments on our back and showing up in flanking ranchers and farmers in bullet proof vests with guns are the same.

Speaker 10:	39:58	Why are you going along with the incidental take permit process sample which is about what is right and what wasn't what was the issue of the last speaker whose husband was shot and actually had video of him dead in the snow. LAVOY
Speaker 32:	40:09	Bennett is a rancher and he was tired of the BLM stealing his water out of his tank not replacing it. They're up in northern Arizona and he was going to teach and speak to a group of about 300 people and John de Oregon a very rural area like it is here at our ranch and teach people about the Constitution. Well according to the Jannette Seneca the widow of Lavoy Kate Brown Governor Kate Brown wanted the disease to stop. And she's the governor of Oregon who said that later said that talking about the Constitution is like a disease. So they have to they have to stop independent people. Robert and Kim they have to stop people who are independent ranchers farmers were independent. And so you got to stop the disease according to these people and we are the disease.
Speaker 26:	40:57	So I mean it was a very powerful to the three day event the red pill expl and Boll's Montana. Hopefully you guys are going to look at next year check it out for yourself. This is only the tip of what was shared but apparently he was shot because he actually took on the challenge. They got it right.
Speaker 25:	41:13	Yes. And that is why again it's so very important to understand how this is impacting people from from Debbie to Finnegan's.
Speaker 27:	41:22	And people across the nation we need we must look at the political agenda of the environmental movement. So this imposition of communism can be stopped.
Speaker 22:	41:30	So Holly in the school system they're teaching this. The political agenda of environmental. Is there a way to teach sustainable environmental to kids or what. What are the warning signs when like if I'm a parent I have a kid and they're coming home and they're talking this jargon what am I. What am I even looking for.
Speaker 25:	41:44	What you're looking for is for example are they talking about social justice. Is the student being programmed to have political views political opinions. And it's everything from how to reduce your carbon footprint to become a vegetarian to go out and protest. These kids don't have the frame of Rights to understand and we're talking about starting this agenda from preschool through high school

and what truly again. If you look at the information in training for treason you will understand that the teaching of humanism that God does not exist. The teaching of how they're teaching anti private property rights how they're teaching that diminishing the value of individual success. And so that the students will be much more programmed to live in a planned society where everybody like in a communist society has you know basically equitable lifestyle and taking away programming just as anti-capitalism has taken away private rights and all this.

Speaker 26: 42:37 Yes. And so that's. And also there was under this law James records who wrote the book Road to Ruin he talks about how you know little towns all across America now they have full armor vehicles and you know I'm I'm a military person. I look I why we need the full armored vehicles. And according to and SWAT teams and all this is make sure that the public unrest stays in check. It's just like tenement Square is what we're heading for. So this is not this is not something that I'm trying to be an alarmist at. I just witnessed with my own eyes exactly how I was up in Sedona Arizona a beautiful place. If you look at the weapons those off those policemen have those a full military grade weapons. And that's not an accident. I'm not saying we should listen to or endorse.

Speaker 26: 43:22 I always say there's three sides to every coin heads tails on the edge. And we've had you know high Hollinger. Now Holly Swanson and Debbie as well as Russell and Sherry Gray. That was just the tip there was so much stuff going on when that guy resigned from the Fish and Game Department because they were intentionally putting wolves on private property and destroying the livelihood of the rancher I came away deeply disturbed. So that's the red pill is you can take the red pill and see what's really going on or you can drink the blue pill and you know believe in stocks bonds and mutual funds and Americans are all good people. So that's why the rich dead radio programs here are not taken aside. I do my best not to but just report what we have seen as private citizens and the comments go.

Speaker 22: 44:04 It's just eye opening and the whole environmental issue right now in terms of what's going on it just opens my eyes to really pay attention and to listen to the words and to see what's going on so I thank you for your vigilance and I thank you for speaking out for the activism and Holly's book is training for treason. I'm going to go out and get that book. I want to find out more what's what is going on and make make my own decisions. And

Speaker 5:	44:24	Debbie you know make sure you take care of Mom and Dad and get TVs off your property. Thank you very much.
Speaker 26:	44:29	I want to thank you for your activism and I motioned for them to speak out and you may upset a few people but I think it's time to upset some people. So thank you for the good work and thank all of you for listening. Keep an open mind but that's the purpose of the Richtel radio program we do our best not to take sides but we want to present different sides. So thank you all. Allison.
